Project Overview

Introduction

Time Stache is a project management tool that will revolutionalize the way you keep track of projects and tasks. The main goal of this application

Features

Dashboard

The application will consist of a dashboard where the user can view most recent projects and easily create new ones. It will also include a list of up and coming deadlines as well as high priority tasks. The dashboard will be the page that the user will first see once they log into their account.

Project Page

The Project Page will show a list of the projects along with an option to look at a calendar view with all of the projects listed in chronological order. The project page will also allow the user to create a new project, or edit one that has already been created

Task Page

The tasks page will be visited once the user chooses a particular project. The page will show all of the tasks for a particular project and the user to add new tasks or edit current ones. Each task will be color coded by importance.

Target Audience

Time Stache is targeting people who need a free project management application to organize their daily activities. The application will be targeting students along with business individuals. The age range will be from 18 - 40.

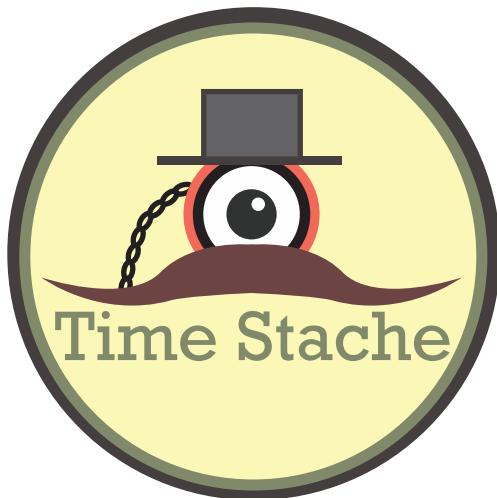

Future Iterations

Future versions of this application will have an analytical section that has reports based on each individual projects so a user can track their progress and use the data to schedule future tasks and projects. The application will also allow users to download and print out the projects in a print friendly version. Time Stache will also turn commercial for whole businesses only and remain free for individuals.

3 Optional Features

Introduction

The following features will be added to the final project to give the customer a better user experience.

Features

Dashboard

The application will consist of a dashboard where the user can view most recent projects and easily create new ones. It will also include a list of up and coming deadlines as well as high priority tasks. The dashboard will be the page that the user will first see once they log into their account.

Calendar View

The calendar view will list out the projects or tasks in a calendar layout so the user can get a better feeling of when deadlines need to be met.

Color Coding

Color coding will be used to set a sense of urgency for each project and task. If a project or task is past due, an additional icon will appear to make them aware.
